Introducing LANexpress 2000—the new, easy-to-use, high-performance remote LAN access solution from Microcom, with the easiest setup of any remote LAN access product. It's easy to use—you can access e-mail or use any network services with one quick user-customizable click.

LANexpress eliminates bottlenecks by using the latest technology such as high-speed modems and enhanced software drivers. The modems and LAN interface are integrated into one unit, eliminating the usual delays from protocol conversion and serial port multiplexing necessitated by external modems. This makes the LANexpress server significantly faster.

LANexpress has both remote control and remote node capabilities, allowing users to increase productivity by choosing the best remote access method for each application.

SERVER CONFIGURATION

- 4 to 12 ports—supports both thick and thin ethernet
- 2 port modem cards accommodate expansion
- Bus-attached modems for high multiport speeds

NETWORK MANAGEMENT

- SNMP support including MIB II, TCP/IP, IPX
- IP addressing assignable
- Both in-band and out-of-band management

Features/Benefits

- Dial-in and dial-out capabilities for easy network access from anywhere.
- Up to 12 simultaneous users at 57.6 Kbps. Provides high speed modem access for high performance.
- Plug and play compatibility with many LAN OSs.
- Remotely upgradeable.
